

LUMINA DESIGN

ARCHITECTURAL GLAZING

A home in a new light.

THE HOMEOWNER COLLECTION

luminadesign.co.uk

More sky. More possibility.

The kitchen where everyone gathers. A quiet corner with a view of the clouds. A dining table that catches the last of the evening light.

Beautiful glazing begins with the way you want to live. Whether you are opening up a modest extension or planning a striking new space, Lumina Design helps you bring daylight into the heart of your home.

Thoughtfully
chosen.
Beautifully
yours.

Find your kind of light.

Rooms, finishes and further collections.

15 **The practical guide**
Glass, measuring, delivery and ordering.

ATLAS ROOF LANTERNS

Make the sky part of the room.

A roof lantern adds height, light and a beautiful sense of occasion. Slender aluminium lines draw the eye upwards, making the space beneath feel open and inviting.

One idea. Your expression.

Contemporary calm

Clean geometry makes a confident focal point above a modern kitchen or dining space.

Timeless character

A more detailed glazing layout can sit beautifully alongside traditional homes and generous extensions.

Stock, square and bespoke sizes: ask us to confirm the available frame layout.

A quieter kind of statement.

A simple glazed opening lets daylight do the talking. Create a bright centrepiece above the kitchen, or bring a welcome view of the sky to a living space.

A discreet alternative to the raised silhouette of a lantern. Explore stock and bespoke sizes.

EXPLORE THE COLLECTION

Lifestyle imagery is illustrative. Confirm the final product specification.

Let the day breathe.

Open your space to fresh air as well as natural light. An electric opening rooflight brings everyday ventilation to places that are difficult to reach.

Think of a warm kitchen, a busy family room or a restful retreat. Confirm controls with your quotation.

Lifestyle imagery is illustrative. Confirm the final product specification.

A beautifully framed view.

A defined aluminium edge gives a crisp finish above your extension. Inside, an uninterrupted pane offers a calm connection with the sky.

Choose a dark frame to complement contemporary windows and doors. Double and triple glazing options.

Lifestyle imagery is illustrative. Confirm the final product specification.

Simply sky.

For a restrained, glass-led look, the Infinity frameless rooflight pairs a polished perimeter with an open view overhead. A considered choice for rooms where simplicity matters.

A fixed glazing system with no aluminium perimeter frame. It needs its own specialist support and weathering detail.

Lifestyle imagery is illustrative. Confirm the final product specification.

Light below. Life above.

Bring daylight into the room beneath an outdoor terrace. A dedicated thermal walk-on rooflight allows the glazing to become part of a carefully planned usable space above.

Designed for a different purpose from an ordinary rooflight. Confirm structure, loading and surface requirements before ordering.

Lifestyle imagery is illustrative. Confirm the final product specification.

A new perspective on your home.

A glass floor can create a striking visual link between interior levels, drawing daylight into spaces beneath and turning an everyday transition into a design feature.

Internal glass flooring is a separate system from an external thermal rooflight. Ask us to review the intended setting.

Where would light change your day?

The kitchen

Bring daylight to the island, the breakfast table and the places where the day begins.

The living room

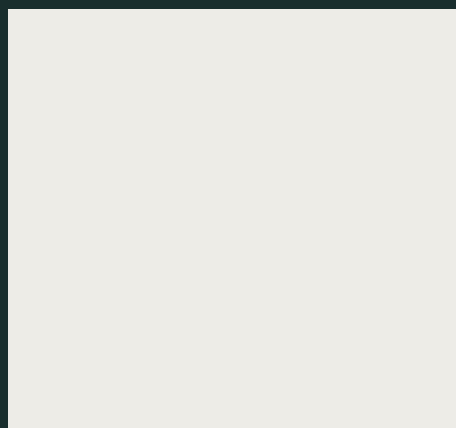

Create an inviting place to read, unwind and watch the changing sky.

The extension

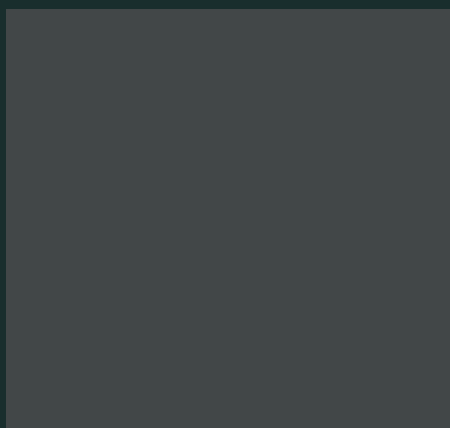

Give a new space a focal point, with a lantern above the dining area or a simple flat rooflight.

Consider every view.

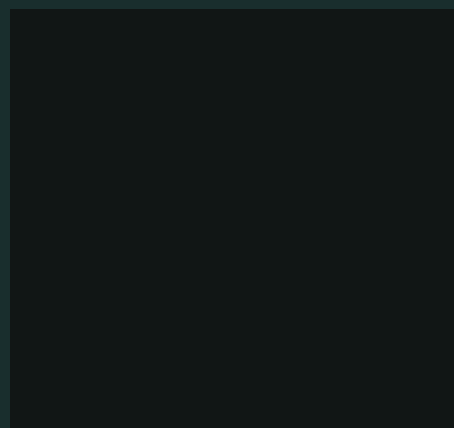

The best choices feel connected: the frame overhead, the windows beyond and the colours within your room.

White

Anthracite

Black

Inside and out

For suitable Atlas products, a darker exterior with a white interior can connect the outside finish with a lighter room beneath.

Comfort by design

Consider sunlight, privacy and the direction your room faces when choosing glass. The practical guide helps you ask the right questions.

Finishes vary by range. Swatches are illustrative; confirm colour availability.

Bring the whole picture together.

Tell us what you are planning. We can discuss complementary products and help establish what is suitable and available for your project.

Aluminium doors

Enquire about bifold and single-door configurations. Each opening needs a clearly agreed layout and a project-specific quotation.

Rooflight and lantern blinds

Ask about shading for your selected glazing. Compatibility, fixing and control options need to be checked before a blind is specified.

Pergolas and balustrades

We are developing these collections. Contact us to discuss your plans and the latest position on products, pricing and installation.

Enquiry collections. Availability and specifications must be confirmed before purchase.

THE PRACTICAL GUIDE

Beautiful choices. Thoughtfully planned.

A few details make all the difference. Use the following pages to guide your conversation with us and your installer, once you have found the look you love.

16 Glass & comfort 17 Measuring
18 Delivery & handling 19 Your next step

Choose for the room.

Clear glass keeps the view neutral. Solar-control options help manage the sun. Privacy glass can soften the view where overlooking matters. Ask us to compare the options for your room and product.

INFINITY FIXED ROOFLIGHTS

Glass finish	Double glazing	Triple glazing
Clear Low-E / Solar Blue	1.2	0.7
Solar Grey / Satin Privacy	1.2	0.7
Solar Clear	1.0	0.5

Figures are glass U-values in W/m²K, not whole-product ratings. Lower values indicate less heat transfer through the glass.

Atlas lanterns & rooflights

Glazing choices and performance vary between the lantern, fixed and opening systems. Confirm the current glass name, glass U-value, solar performance and whole-product rating in your quotation. Do not transfer Infinity figures to Atlas products.

Walk-on glazing

Walk-on glass needs a separate, application-specific build-up. Thickness alone does not establish whether it is suitable.

Measure the right opening.

The order size is different between ranges. Give your installer the guide for the exact product before the kerb or support is built.

Atlas lanterns

External finished kerb dimensions. A 67mm ringbeam gives a nominal internal frame opening of external size minus 134mm in each direction. This is not automatically the finished ceiling opening.

Atlas fixed & electric

External finished kerb dimensions. For an opening rooflight, confirm the slope side and hinge side. Follow the product drawing for pitch and support details.

Infinity fixed rooflights

Internal structural opening, measured between the inner upstand faces before internal lining. The outer glass or frame is larger. Framed and frameless support details differ.

Infinity walk-on products

Use the approved drawing for the exact walk-on system. Confirm the structural opening, bearing, overall glass or frame size and installation tolerances with us before manufacture.

Before ordering: check both dimensions and diagonals, then ask us to confirm your drawing. This brochure is not an installation drawing.

Plan the arrival.

A smooth delivery begins before your glazing leaves the factory. Share access details and agree an unloading plan with your installer.

01 Check access

Tell us about narrow roads, restricted parking, tight turns or any limits on access. Delivery dates and arrival times need to be confirmed for your order.

02 Arrange safe unloading

Delivery is to the kerbside, rather than into your home or onto the roof. Arrange suitable help or rated lifting equipment for the actual unit weight and site conditions.

03 Prepare the installation

Glazing can be extremely heavy. Large walk-on units may require mechanical lifting. Agree weights, lifting points and any stillage needs before booking equipment.

04 Be ready on the day

Have someone available to receive, inspect and sign for the delivery. Confirm any damage-reporting process and redelivery terms with us in advance.

Infinity: free mainland UK kerbside delivery. Confirm other destinations, Atlas delivery terms and current lead times with your quotation. Installation and on-site positioning are separate.

From an idea to your everyday.

1 Find your favourite

Choose the feeling you want to create. Share your preferred product, a room photo or a simple sketch.

2 Bring the details together

We will help you check the size, glazing, finish and product requirements, alongside your installer.

3 Confirm and order

Review your written specification, price and delivery arrangements before placing the order.
